Loom Video Testimonial: Shyan CEO Feedback

✨ About Me 🔗

I'm a self-taught, high-agency software engineer with over 6 years of experience across startups and enterprises. I specialize in backend systems, AI integrations, and full-stack architecture. Known for my ability to step into chaos and bring structure, I'm often the go-to person when things get complicated or undefined.

I combine logic, speed, and creativity to solve problems that others walk away from. Whether it's debugging complex production issues or building AI-first automation tools from scratch, I thrive in the deep end.

🚀 Core Skills & Tools 🔗

Languages & Frameworks:
JavaScript, TypeScript, Python, HTML, CSS, SCSS, TailwindCSS, React, React-Native, Redux, Node.js, NestJS, Express.js

Databases & APIs: MongoDB, PostgreSQL, MySQL, Redshift, REST, WebSockets, Pub/Sub systems, YouTube Data v3 API, RapidAPI integrations, Integrations with Third-Party Tools

Cloud & DevOps:
AWS (Lambda, S3, EC2), GCP (Cloud Functions, Pub/Sub), Azure, Docker, Kubernetes, Heroku, Netlify, GitHub Actions

AI & Automation:
Prompt Engineering, OpenAI (ChatGPT, Whisper, TTS), Gemini, Claude, Puppeteer, Web Scraping, AI chatbot customization, LLM integrations and tooling (actively learning LangChain, CrewAI, Agentic workflows)

Productivity & Communication:
Jira, Confluence, Slack (including Slack API integrations), Trello, Loom, VS Code, Git

Media Tools:
FFmpeg (media processing, chunking, audio syncing), TTS generation, Whisper-based transcription pipelines

---

💼 Professional Experience 🔗

Powerhouse – Intrepid Travel AI Platform
Senior Software Engineer (*Freelance*)
Stack: LLMs, AI Workflows

- Worked with Shyan (Powerhouse CEO) on a smart AI platform for travel agents and travelers.
- The system gathered inputs via a question-based interface and used LLMs to generate personalized travel plans.
- Travel plans were reviewed by agents and sent back to the customer in a structured format.
- Built and refined core logic with AI-assisted workflows to support dynamic plan generation, review, and handoff processes.

BlinkCharging

- Played a key role in mentoring peers and assisting cross-functional teams with architecture decisions.

Senior Software Engineer
Stack: NestJS, Node.js, PostgreSQL, Redshift, Microservices, AI Integrations

- Collaborated on ETL Services, Reporting Services, and additional projects.
- Enhanced the existing codebase and introduced AI tools to boost productivity.
- Played a key role in developing version 1 of BlinkAi (chatbot).

only4values Enterprise

- Acted as the technical go-to for multiple teams, mentoring newer developers and shaping engineering decisions.

Senior Software Engineer
Stack: React, Node.js, NestJS, MongoDB, Microservices, Docker, GCP, Azure, AWS, Twilio, SendGrid

- Led the engineering of internal tools, AI-first services, and B2B platforms spanning AI-driven outreach, automation pipelines, and API integrations.
- Designed a scalable multi-cloud architecture for internal systems and client-facing solutions.
- Integrated advanced AI tools to drive 10x productivity in development workflows.

Infosys (Nike USA Project)
Senior Software Engineer
Stack: React, Node.js, Express, AWS, DocumentDB, Elasticsearch

- Developed and maintained internal tools and reporting portals used by Nike's operational teams.

Bini GmbH, Germany (Freelance)

- Provided technical guidance and mentorship to junior developers and collaborators within the team.

Senior Software Engineer
Stack: React, Node.js, MySQL, Heroku, Netlify, Twilio, React-Native

- Led the development of an automation platform for physical retail stores involving mobile apps (used by customers) and operator dashboards (used by store operators).
- Built and maintained the main backend responsible for syncing inventory and order flow between mobile and dashboard interfaces in real time.
- Collaborated with AI/ML and hardware teams to ensure seamless data exchange via backend communication channels.
- Took full ownership of frontend (React + React-Native), backend (Node.js), and system architecture — excluding the hardware/ML modules handled by separate engineers.

Eminence Technology (India) (Freelance)

- Mentored junior developers and contributed to improving team workflows and debugging practices.

MERN Stack Developer
Stack: MERN, AWS

- Worked on multiple client projects in a fast-paced service-based environment.
- Notable projects include:

- A Twitch/YouTube-like portal where creators can live stream, receive gifts, and monetize interactions.
- A video editing and testing web portal built for marketing teams to create, test, and launch video campaigns.
  - Took ownership of debugging, building core modules, and supporting other teams with quick and effective technical contributions.

🧠 AI & Productivity Edge 🔗

- Actively working with AI/ML tools, including OpenAI, Claude, and Gemini, to automate content, productivity, and user workflows.
- Skilled in AI-based transcription, dubbing, text-to-speech, and prompt-engineered automation.
- Learning tools like LangChain, CrewAI, and other agentic frameworks to build future-ready AI pipelines.

🎓 Education 🔗

Self-Taught Engineer with 6+ years of professional and freelance experience.

- Hands-on learner and systems thinker who thrives on experimentation.

📊 Feedback & Social Proof 🔗

- **Shyan Powerhouse CEO:** [Loom Testimonial](#)
- ⭐ Screenshot-based Client Feedback: [View Gallery](#)
- Known for: ownership mindset, speed, resilience, and strong communication with tech and non-tech teams.

📦 Project Highlights 🔗

Dubmate – AI Video Dubbing Platform
Designed and developed a dubbing automation platform that translates and syncs videos across multiple languages using Whisper, OpenAI TTS, and FFmpeg. Integrated with social media scheduling tools for multi-language content management at scale.

LinkedIn AI Outreach Automation Tool (Chrome Extension)
Built a Chrome extension that scrapes LinkedIn profiles, evaluates lead quality using AI, and generates hyper-personalized outreach messages. Features include auto-visiting, message previews, and human-like timing for message delivery.

Agentic Workflow Prototypes
Prototyped agentic pipelines using OpenAI + Gemini APIs for building structured content and automated task flows. Use cases include audiobook generation, automated chunking/merging, and AI-assisted task chaining.

📞 Reach Out 🔗

I'm open to challenging engineering roles, AI-first product building, or consulting engagements in emerging tech. Let's build something impactful.
